

Unlocking TrueDent®
Advanced Aesthetics with
TrueVoxel™

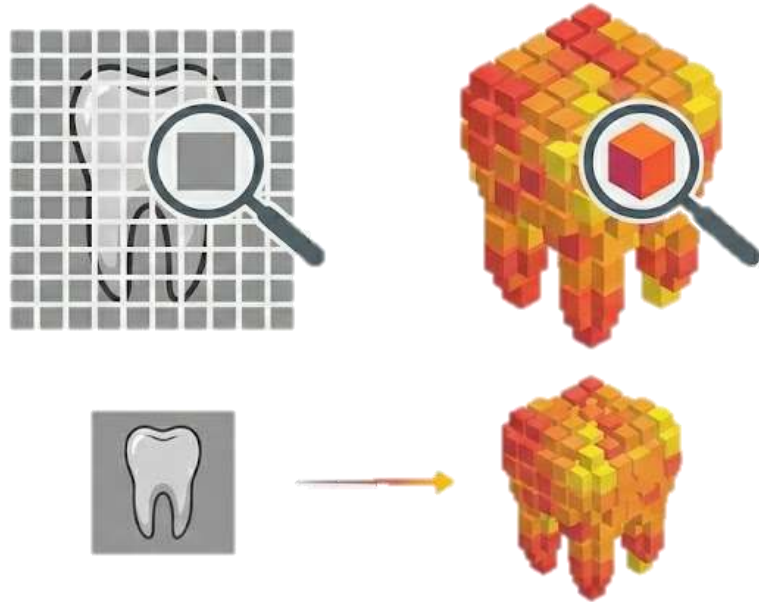

Make additive work for you™

Introducing TrueDent TrueVoxel™ Shades

TrueVoxel

A **voxel** is a volumetric pixel with material and color attributes

TrueVoxel

TrueVoxel is a patent-pending solution which uses **voxel-level control** to place:

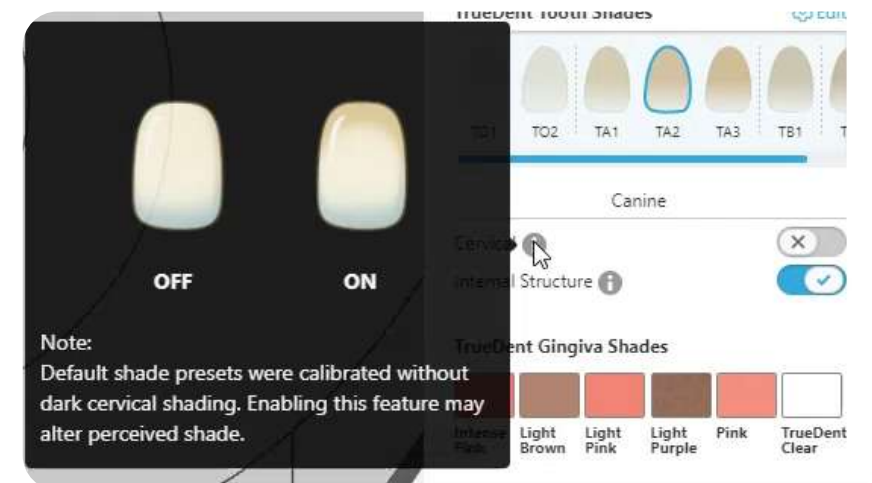

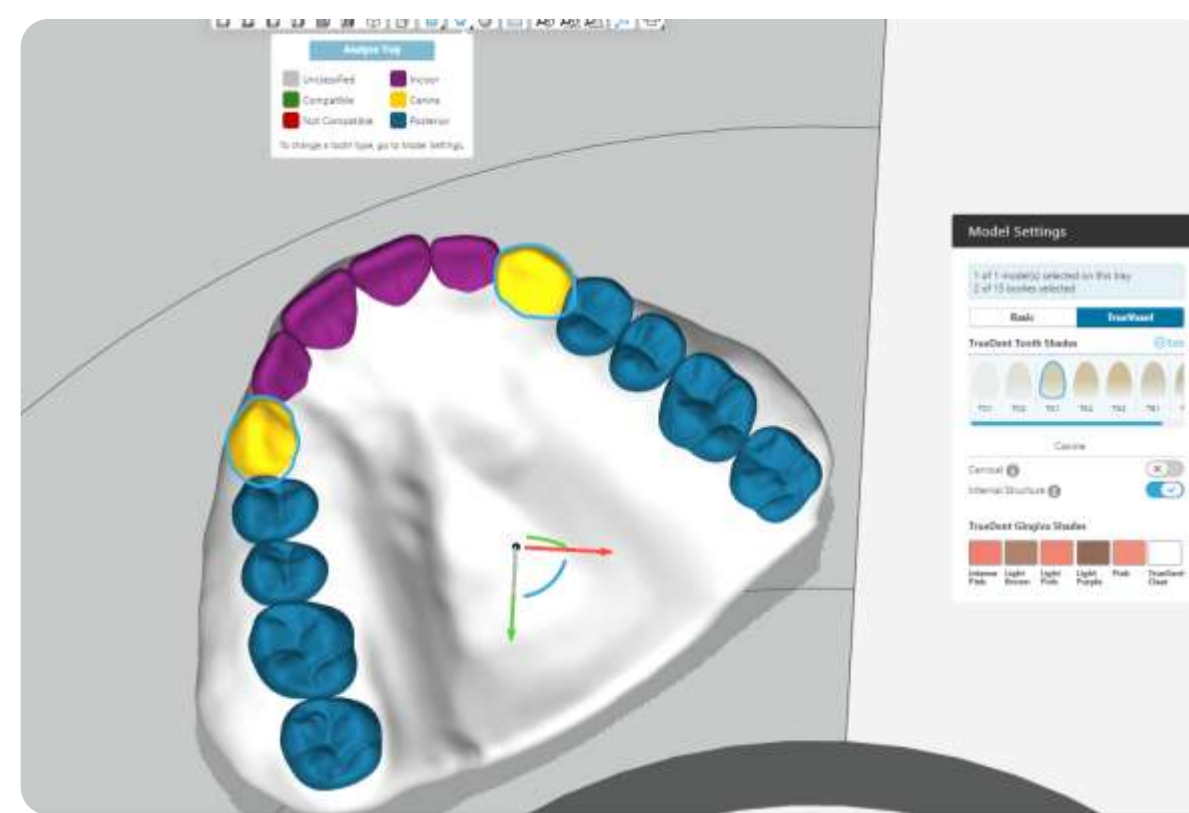

- ◊ Translucency in the incisal third of the tooth
- ◊ Internal structures
- ◊ Cervical staining

Inside the tooth volume

How TrueVoxel Works?

- ❖ Dentures are loaded as usual into GrabCAD Print
- ❖ Software performs an analysis on the design
- ❖ Based on tooth geometry and type, the system:
 - generates internal 3D structures
 - applies volumetric gradients
 - keeps **external geometry unchanged**

Industrialized Artistry: Premium Aesthetics, Automated

- ◆ Available in April for all TrueDent users – with no additional cost
- ◆ Shades available at launch – TO1, TO2, TA1, TA2, TA3, TB1, TC1.

Beta Tester Feedback

Supporting Feedback from Global Dental Demographic

"Natural chromatic transitions elevate dentures beyond simple resins, enabling standardized quality, clinical acceptance, and scalable production." – Federico Milano, DP Group

"The prosthetics look excellent, making them easier to market and highly appreciated by doctors, who are increasingly requesting the new applications."— Tal Nisman, CEO, NDM

"More natural and life-like appearance to the incisal edges. Nice gradient transition to the cervical. The results are highly impressive. I would definitely choose these over basic shades."— Bismark

" These teeth look too good to be dentures."

"Overall, I believe this is a very satisfactory result from the time put into develop this technology. I would definitely use these over the basic shades."

"Cervical shade density, natural looking, nice to have more translucency on the incisal and occlusal parts, internal structures."

"The color scheme has been continuously improved with Updates"

"I will promote this to my clients to enhance my offerings for both full and partial dentures"
